As a traveller, I want to plan a route between two locations so that I can travel safely.

As an admin, I want to change the indicator value of a segment to reflect recent changes in the environment.

As a user, I want to access the application via a webpage for ease of use

As a traveller I want to select routes to complete a mission to learn more about safe routes

As a user, I would like to be able to visualise routes on the map so that I can understand them better.

As an admin, I want to add new routes with new respective indicator values.

As a user I would like to log into an admin/traveller account securely

As a traveller I want to select edges to create a new route to complete a mission

Build a dataset

7/7

Backend Database Manager,
querying the database and
translating it for route finding
and other processes (Sanitising
too)

Backend Server Program
(HTTP, Requests, Manager)

Frontend that handles user
input and displays application

Hosting/HTTP Request
Handling

Create Map that is interactive,
can be edited, and routes can
be easily be displayed and
followed.

Route finding algorithm

Database creation

10 min demo/presentation
(sprint 1)

19 Feb

Users earn points/badges and
can track progress

Ability to take on missions and
complete missions

Mission criteria

Mission start/end

Visualise route selected

Update database after admin
actions

5 automated tests + pdf
document
